Amendment dated June 16, 2004

Reply to Office Action of April 22, 2004

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:** 

Claims 1-4 (canceled)

Claim 5 (previously presented): An information utilization apparatus comprising:

a memory configured to store a delivered piece of information including encoded data

and applicable time data defining a time period authorizing use of the encoded data;

a verification unit configured to verify whether the applicable time data included in the

delivered piece of information in said memory has been falsified;

a plurality of independently operated decoding units configured to decode the encoded

data stored in said memory unit;

a plurality of independently operated processing units arranged respectively

corresponding to said plurality of independently operated decoding units and configured to

respectively execute different operations on the data decoded by said plurality of independently

operated decoding units;

a judging unit configured to judge if a current time is in the time period authorizing use

of the encoded data according to the verified applicable time data in response to a request for an

operation; and

an operation command issuing unit configured to issue a command responding to the

request for the operation to a corresponding one of the plurality of independently operated

decoding units if the current time is judged by said judging unit to be in the time period

authorizing use of the encoded data according to the verified applicable time data, whereby

selectively enabling one of the plurality of independently operated decoding units and one of the

plurality of independently operated processing units to execute the requested operation.

Claim 6 (previously presented): An information utilization apparatus comprising:

a memory configured to store a delivered piece of information including encoded data

and applicable time data defining a time period authorizing use of the encoded data;

Page 2 of 15

Amendment dated June 16, 2004

Reply to Office Action of April 22, 2004

a verification unit configured to verify whether the applicable time data included in the

delivered piece of information in said memory has been falsified;

a decoding unit configured to decode the encoded data stored in said memory;

a plain data storage unit configured to store the data decoded by said decoding unit;

a plurality of independently operated processing units configured to respectively execute

different operations on the decoded data stored by said plain data storage unit;

a judging unit configured to judge if a current time is in the time period authorizing use

of the encoded data according to the verified applicable time data in response to a request for an

operation; and

an operation command issuing unit configured to issue a command responding to the

request for the operation to said decoding unit and a corresponding one of the plurality of

independently operated processing units if the current time is judged by said judging unit to be in

the time period authorizing use of the encoded data according to the verified applicable time data

and said plain data storage unit does not store the decoded data, and to issue a command

responding to the request for the operation to the corresponding one of the plurality of

independently operated processing units if the current time is judged by said judging unit to be in

the time period authorizing use of the encoded data and said plain data storage unit stores the

decoded data, whereby selectively enabling one of the plurality of independently operated

processing units to execute the requested operation.

Claim 7 (previously presented): An information utilization apparatus comprising:

a memory configured to store a delivered piece of information including encoded data

and applicable time data defining a time period authorizing use of the encoded data;

a verification unit configured to verify whether the applicable time data included in the

delivered piece of information in said memory has been falsified;

a plurality of independently operated decoding units configured to decode the encoded

data stored in said memory;

Page 3 of 15

Amendment dated June 16, 2004

Reply to Office Action of April 22, 2004

a plurality of independently operated processing units arranged respectively

corresponding to said plurality of independently operated decoding units and configured to

respectively execute different operations on the data decoded by said plurality of decoding units;

a judging unit configured to judge if a current time is in the time period authorizing use

of the encoded data according to the verified applicable time data in response to a request for an

operation;

an operation command issuing unit configured to issue a command responding to the

request for the operation to a corresponding one of the plurality of independently operated

decoding units if the current time is judged by said judging unit to be in the time period

authorizing use of the encoded data, whereby selectively enabling one of the plurality of

independently operated decoding units and one of the plurality of independently operated

processing units to execute the requested operation; and

an operation command reserving unit configured to prevent the issuance of a command

responding to the request for the operation until the time authorizing use of the encoded data if

the current time is judged by said judging unit not to be in the time period authorizing use of the

encoded data.

Claim 8 (previously presented): An information utilization apparatus comprising:

a memory configured to store a delivered piece of information including encoded data

and applicable time data defining a time period authorizing use of the encoded data;

a verification unit configured to verify whether the applicable time data included in the

delivered piece of information in said memory has been falsified;

a decoding unit configured to decode the encoded data stored in said memory;

a plain data storage unit configured to store the data decoded by said decoding unit;

a plurality of independently operated processing units configured to respectively execute

different operations on the decoded data stored by said plain data storage unit;

a judging unit configured to judge if a current time is in the time period authorizing use

of the encoded data according to the verified applicable time data in response to a request for an

operation;

Page 4 of 15

Amendment dated June 16, 2004

Reply to Office Action of April 22, 2004

an operation command issuing unit configured to issue a command responding to the

request for the operation to said decoding unit and a corresponding one of the plurality of

independently operated processing units if the current time is judged by said judging unit to be in

the time period authorizing use of the encoded data by referring to the verified applicable time

data and said plain data storage unit does not store the decoded data, and to issue a command

responding to the request for the operation to the corresponding one of the plurality of

independently operated processing units if the current time is judged by said judging unit to be in

the time period authorizing use of the encoded data and said plain data storage unit stores the

decoded data, whereby selectively enabling one of the plurality of independently operated

processing units to execute the requested operation; and

an operation command reserving unit configured to prevent the issuance of a command

responding to the request for the operation until the time authorizing use of the encoded data if

the current time is judged by said judging unit not to be in the time period authorizing use of the

encoded data.

Claim 9 (canceled)

Claim 10 (previously presented): An information access control method for use in an

information utilization apparatus having a memory which stores a delivered piece of information

including encoded data, said method comprising:

verifying whether applicable time data included in the delivered piece of information in

said memory has been falsified, the applicable time data defining a time period authorizing use

of the encoded data;

arranging a plurality of independently operated decoding units to decode the encoded

data stored in said memory;

arranging a plurality of independently operated processing units respectively

corresponding to said plurality of decoding units to respectively execute different operations on

data decoded by said plurality of independently operated decoding units;

judging if a current time is in the time period authorizing use of the encoded data by

referring to the verified applicable time data in response to a request for an operation; and

Page 5 of 15

Amendment dated June 16, 2004

Reply to Office Action of April 22, 2004

issuing a command responding to the request for the operation to a corresponding one of the plurality of independently operated decoding units if the current time is judged to be in the time period authorizing use of the encoded data by referring to the verified applicable time data, whereby selectively enabling one of the plurality of independently operated processing units to execute the requested operation.

Claim 11 (previously presented): An information access control method for use in an information utilization apparatus having a memory which stores a delivered piece of information including encoded data, said method comprising:

verifying whether applicable time data included in the delivered piece of information in said memory has been falsified, the applicable time data defining a time period authorizing use of the encoded data;

arranging a decoding unit to decode the encoded data stored in said memory;

arranging a plain data storage unit to store data decoded by said decoding unit;

arranging a plurality of independently operated processing units to respectively execute different operations on data stored by said plain data storage unit;

judging if a current time is in the time period authorizing use of the encoded data by referring to the verified applicable time data in response to a request for an operation; and

issuing a command responding to the request for the operation to said decoding unit and a corresponding one of the plurality of independently operated processing units if the current time is judged to be in the time period authorizing use of the encoded data by referring to the verified applicable time data and said plain data storage unit does not store the decoded data, and issuing a command responding to the request for the operation to the corresponding one of the plurality of independently operated processing units if the current time is judged to be in the time period authorizing use of the encoded data and said plain data storage unit stores the decoded data, whereby selectively enabling one of the plurality of independently operated processing units to execute the requested operation.

Amendment dated June 16, 2004

Reply to Office Action of April 22, 2004

Claim 12 (previously presented): An information access control method for use in an information utilization apparatus having a memory which stores a delivered piece of information including encoded data, said method comprising:

verifying whether applicable time data included in the delivered piece of information in said memory has been falsified, the applicable time data defining a time period authorizing use of the encoded data;

arranging a plurality of independently operated decoding units to decode the encoded data stored in said memory;

arranging a plurality of independently operated processing units respectively corresponding to said plurality of independently operated decoding units to respectively execute different operations on data decoded by said plurality of independently operated decoding units;

judging if a current time is in the time period authorizing use of the encoded data by referring to the verified applicable time data in response to a request for an operation;

issuing a command responding to the request for the operation to a corresponding one of the plurality of independently operated decoding units if the current time is judged to be in the time period authorizing use of the encoded data, whereby selectively enabling one of the plurality of independently operated decoding units and one of the plurality of independently operated processing units to execute the requested operation; and

preventing the issuance of a command responding to the request for the operation until the time authorizing use of the encoded data if the current time is judged not to be in the time period authorizing use of the encoded data.

Claim 13 (previously presented): An information access control method for use in an information utilization apparatus having a memory which stores a delivered piece of information including encoded data, said method comprising:

verifying whether applicable time data included in the delivered piece of information in said memory has been falsified, the applicable time data defining a time period authorizing use of the encoded data;

arranging a decoding unit to decode the encoded data stored in said memory;

Amendment dated June 16, 2004

Reply to Office Action of April 22, 2004

arranging a plain data storage unit to store data decoded by said decoding unit;

arranging a plurality of independently operated processing units to respectively execute

different operations on data stored by said plain data storage unit;

judging if a current time is in the time period authorizing use of the encoded data by

referring to the verified applicable time data in response to a request for an operation;

issuing a command responding to the request for the operation to said decoding unit and a

corresponding one of the plurality of independently operated processing units if the current time

is judged to be in the time period authorizing use of the encoded data by referring to the verified

applicable time data and said plain data storage unit does not store the decoded data, and issuing

a command responding to the request for the operation to the corresponding one of the plurality

of independently operated processing units if the current time is judged to be in the time period

authorizing use of the encoded data and said plain data storage unit stores the decoded data,

whereby selectively enabling one of the plurality of independently operated processing units to

execute the requested operation; and

preventing the issuance of a command responding to the request for the operation until

the time authorizing use of the encoded data if the current time is judged not to be in the time

period authorizing use of the encoded data.

Claim 14 (canceled)

Claim 15 (previously presented): A storage medium having program code instructions stored

thereon which perform information access control when executed by a processor in an

information utilization apparatus having a memory which stores a delivered piece of information

including encoded data, said instructions comprising:

storing the delivered piece of information in said memory together with applicable time

data not to be falsified, the applicable time data defining a time period authorizing use of the

encoded data;

arranging a plurality of independently operated decoding units to decode the encoded

data stored in said memory;

Page 8 of 15

Amendment dated June 16, 2004

Reply to Office Action of April 22, 2004

arranging a plurality of independently operated processing units respectively

corresponding to said plurality of independently operated decoding units to respectively execute

different operations on data decoded by said plurality of independently operated decoding units;

judging if a current time is in the time period authorizing use of the encoded data by

referring to the applicable time data in response to a request for an operation; and

issuing a command responding to the request for the operation to a corresponding one of

the plurality of independently operated decoding units if the current time is judged to be in the

time period authorizing use of the encoded data by referring to the applicable time data, whereby

selectively enabling one of the plurality of independently operated decoding units and one of the

plurality of independently operated processing units to execute the requested operation.

Claim 16 (previously presented): A storage medium having program code instructions stored

thereon which perform information access control when executed by a processor in an

information utilization apparatus having a memory which stores a delivered piece of information

including encoded data, said instructions comprising:

storing the delivered piece of information in said memory together with applicable time

data not to be falsified, the applicable time data defining a time period authorizing use of the

encoded data;

arranging a decoding unit to decode the encoded data stored in said memory;

arranging a plain data storage unit to store data decoded by said decoding unit;

arranging a plurality of independently operated processing units to respectively execute

different operations on data stored by said plain data storage unit;

judging if a current time is in the time period authorizing use of the encoded data by

referring to the applicable time data in response to a request for an operation; and

issuing a command responding to the request for the operation to said decoding unit and a

corresponding one of the plurality of independently operated processing units if the current time

is judged to be in the time period authorizing use of the encoded data by referring to said

applicable time data and said plain data storage unit does not store the decoded data, and issuing

a command responding to the request for the operation to the corresponding one of the plurality

Page 9 of 15

Amendment dated June 16, 2004

Reply to Office Action of April 22, 2004

of independently operated processing units if the current time is judged to be in the time period

authorizing use of the encoded data and said plain data storage unit stores the decoded data,

whereby selectively enabling one of the plurality of independently operated processing units to

execute the requested operation.

Claim 17 (previously presented): A storage medium having program code instructions stored

thereon which perform information access control when executed by a processor in an

information utilization apparatus having a memory which stores a delivered piece of information

including encoded data, said instructions comprising:

storing the delivered piece of information in said memory together with applicable time

data not to be falsified, the applicable time data defining a time period authorizing use of the

encoded data;

arranging a plurality of independently operated decoding units to decode the encoded

data stored in said memory;

arranging a plurality of independently operated processing units respectively

corresponding to said plurality of independently operated decoding units to respectively execute

different operations on data decoded by said plurality of independently operated decoding units;

judging if a current time is in the time period authorizing use of the encoded data by

referring to applicable time data in response to a request for an operation;

issuing a command responding to the request for the operation to a corresponding one of

the plurality of independently operated decoding units if the current time is judged to be in the

time period authorizing use of the encoded data, whereby selectively enabling one of the

plurality of independently operated decoding units and one of the plurality of independently

operated processing units to execute the requested operation; and

preventing the issuance of a command responding to the request for the operation until

the time authorizing use of the encoded data if the current time is judged not to be in the time

period authorizing use of the encoded data.

Claim 18 (previously presented): A storage medium having program code instructions stored

thereon which perform information access control when executed by a processor in an

Page 10 of 15

Amendment dated June 16, 2004

Reply to Office Action of April 22, 2004

information utilization apparatus having a memory which stores a delivered piece of information including encoded data, said instructions comprising:

storing the delivered piece of information in said memory together with applicable time data not to be falsified, the applicable time data defining a time period authorizing use of the encoded data;

arranging a decoding unit to decode the encoded data stored in said memory;

arranging a plain data storage unit to store data decoded by said decoding unit;

a plurality of independently operated processing units to respectively execute different operations on data stored by said plain data storage unit;

judging if a current time is in the time period authorizing use of the encoded data by referring to applicable time data in response to a request for an operation;

issuing a command responding to the request for the operation to said decoding unit and a corresponding one of the plurality of independently operated processing units if the current time is judged to be in the time period authorizing use of the encoded data by referring to said applicable time data and said plain data storage unit does not store the decoded data, and issuing a command responding to the request for the operation to the corresponding one of the plurality of independently operated processing units if the current time is judged to be in the time period authorizing use of the encoded data and said plain data storage unit stores the decoded data, whereby selectively enabling one of the plurality of independently operated processing units to execute the requested operation; and

preventing the issuance of a command responding to the request for the operation until the time authorizing use of the encoded data if the current time is judged not to be in the time period authorizing use of the encoded data.
